

# FLICKERMASTER™

- REALISTIC FLICKER AND STROBE EFFECTS WITH SPE-6 FLICKERMASTER™
- 2000W FLICKER / STROBE GENERATOR

The Flickermaster™ creates realistic flicker effects that range from the flickering light of a movie or TV screen, candle or gas light, to roaring flames and more. You can choose between random flicker and strobe. Flickermaster™ features a built-in, 2000W dimmer with filtering to minimize interference with sound and other electronic equipment on the set. Available in 120v and 230v units, the Flickermaster™ can handle a 2000w incandescent load, and will create the most realistic fire effects that you have ever seen. Fuse, input and output cable are recessed mounted on the back of case.
